

# Terminal Operator Insights

City staff received input from **6 terminal respondents** out of 13 entities contacted by phone and email.

Question: *What, if any, changes are you making in your operations in order to comply with the City's updated RFS policy?*

# No respondents are concerned about complying with the 2024 15% biofuel content requirement

All say they will be able to comply with the 15% biofuel content requirement.

Some are already supplying diesel fuel at or exceeding 15% biofuel content.

Some are more concerned about complying with the 2026 50% biofuel content requirement.

Some noted one or more of the biofuels they currently bring in is above the 40 CI limit, requiring them to find alternate sources.

# Interviewees mentioned two operational questions they are addressing

Will they have sufficient tank capacity to segregate biofuels or biofuel blends?

Will they have capacity to receive a sufficient volume of biofuels, given the modes by which those fuels will arrive at their facilities?
