Type of Code Evaluation Inspection Requested (please check box(s) and see back for details on type of inspections)

Attic Inspection     Basement Inspection  
 Type B Accessory Short-Term Rental Inspection     ADU     Electrical Code Evaluation  
 Plumbing Code Evaluation     Building Code Evaluation     Mechanical Code Evaluation

Received by \_\_\_\_\_ IVR # \_\_\_\_\_

*Intake Staff: Route Attic, Basement, and Type B requests to Code Compliance*

### STATEMENT OF UNDERSTANDING

I, the undersigned owner, request an inspection of my property located at:

\_\_\_\_\_

I understand that should one or more substandard conditions be found to exist in the building or on the premises, I will be required to correct the condition(s) prior to (re)occupancy. In addition, I understand that I am required to correct the condition(s) even if the property is sold unless arrangements are made with the buyer and/or mortgage company for correcting the condition(s) that are satisfactory to Portland Permitting & Development.

I also understand that if the violations found are not corrected within thirty (30) days of the date of a violation letter, I may be subject to a monthly enforcement fee until the violations are corrected and the property is reinspected and approved by Portland Permitting & Development.

Date: \_\_\_\_\_

Signature of owner: \_\_\_\_\_

# Description of Code Evaluation Inspections

## Attic/Basement Inspection

Portland Permitting & Development provides inspections for homeowners when a modification to an attic or basement space is planned and when the permit records are silent on the historical use of the attic or basement. There are cases where the Building Permit records indicate only one-story or no basement where, in fact, the original second floor attic or basement space was built as habitable space. The purpose of the inspection is to ascertain whether the attic and basement areas were intended for and used as living space at the time the house was constructed.

The determination is made through an examination of the space configuration and of the finish materials. Floor finish, wall cover material, window trim, head height, and stair construction are some of the features evaluated. While the actual finish material may vary from those found on the first floor, the criteria for finish material is predicated on what type of finishes were typical for the time period of original construction and for the style of the house. In addition to these criteria, non-daylight basement determinations for habitability generally focus on the existence of a finished fireplace.

Upon completion of the inspection, a determination of the status of the second floor/attic space or basement will be made and entered as an Inquiry Folder within the TRACS building permit database.

## ADU Inspection

Where an Accessory Dwelling Unit (ADU) is being created from existing space either through conversion of a garage or interior dwelling space, a pre-application ADU inspection is often required. This inspection will provide the owner with additional information about what changes may be necessary to make the project meet minimum code requirements to and create an ADU. After the inspection, an inspection report will be completed noting any corrections necessary for the creation of the ADU.

## Electrical, Plumbing, Building, Mechanical Code Evaluations

In some situations the public may request a code evaluation for electrical, plumbing, mechanical, or structural conditions at a residential structure. The inspector will conduct a visual inspection of the accessible components and create a list of code deficiencies based on the current conditions of the structure. ***Please note that a code evaluation requested inspection is not a "home inspection" and should not be considered similar to private home inspection services.***

## Type B Accessory Short-Term Rental Inspection

As part of a Type B Accessory Short-Term Rental application, processed through either a Type II or Type III Land Use Conditional Use Review, the bedrooms to be rented to overnight guests must be verified in compliance with the following requirements:

1. The bedrooms met the Building Code requirements for a sleeping room at the time they were created or converted;
2. Has a smoke detector that is interconnected with a smoke detector in an adjacent hallway; and
3. Is located on the floor of a dwelling unit equipped with a functioning carbon monoxide alarm. If the dwelling unit does not have a carbon monoxide source, then a carbon monoxide alarm is not required.

\*A \$154 reinspection fee will be assessed if the required smoke detectors and carbon monoxide alarms are not installed as required.

For questions on Attic/Basement Inspections please contact (503) 823-2633, for questions on ADU Inspections and Electrical, Plumbing, and Building Code Evaluations contact (503) 823-7388. For questions on Type B Accessory Short-Term Rental Inspection contact (503) 823-7526.
