Topic or Description	Keeping the front seat empty, it's needed.
How is this impacting your industry?	Well, I have not gotten sick in the two years that I have not had passengers in the front seat.
Reason for consideration or change to the regulations?	There are less driver and passenger attacks (IMO) if passengers are not in the front seat. There is less chance of spreading an illness with passengers blocked from the front seat.
Proposed solution:	I think PBoT should make it a regulation that the front seat of TNC Rideshare rides be empty. Capping regular cars at 3 passengers, and LX vehicles at 5 passengers. If passengers want 4 (for Regular) or 6 for LX, there should be a 100% to the driver per mile surcharge of at least 25% of the base rate.
