Bull Run Treatment Projects Update

Permits Received - Mobilization Begins

The Portland Water Bureau has received the permits from Multnomah County and the City of Gresham which allow us to begin construction on the filtration facility site for this critical water system improvement. This project is required to meet state and federal drinking water regulations.

Contractors have been in the area surveying and preparing for access improvements. Beginning the week of June 3rd, our contractors will be mobilizing to the facility site. To start, we are planning to move equipment to the site and install a site perimeter fence and erosion control measures. After this initial setup, the contractor will begin clearing, grubbing, tree removal, excavation, and construction of temporary roads on site. PGE will also be setting new power poles on the north side of Carpenter Lane to prepare for widening and resurfacing Carpenter Lane.

With these permits in hand, the Bureau is refining schedules with contractors and will provide more details as dates are confirmed. To stay informed be sure to subscribe to our e-newsletter, text notifications, and visit our construction webpage

About the Bull Run Treatment Projects

To comply with federal Safe Drinking Water Act regulations, the Portland Water Bureau is planning a water [filtration](#) facility and related pipelines, and recently completed an [improved corrosion control treatment](#) facility. The Bull Run Treatment Projects will provide consistent, high-quality drinking water that meets today's water quality standards, helps address aging infrastructure concerns and future risks and regulations, and improves system resilience to help keep our water safe and abundant for generations to come.
